

Problem 283: Smoothie Stand

Difficulty: Easy

Problem Background

You are a smoothie shop owner, and you get a lot of customers. Unfortunately, some of your shipments were delayed, so you don't have as many ingredients on hand as usual. Rather than manually figure out if each customer's smoothie can be made, you decide to write a program to do it for you.

Problem Description

Your goal is to write an application that determines if a smoothie can be made with a given set of ingredients. Each smoothie requires the following ingredients:

- Strawberry Swirl: Strawberry, Blueberry
- Banana Burst: Banana, Kiwi, Orange
- Tropical Tango: Kiwi, Orange, Mango, Blueberry
- Mango Medley: Mango, Strawberry, Blueberry, Banana

Sample Input

The first line of your program's input, **received from the standard input channel**, will contain a positive integer representing the number of test cases. Each test case will include one line listing the ingredients you have in lowercase, each of them separated by a vertical bar, and one line listing the smoothie your customer wants (using one of the four names listed above, in lowercase).

```
2
banana|orange|blueberry|kiwi
strawberry swirl
orange|strawberry|blueberry|kiwi|banana
banana burst
```

Sample Output

For each test case, your program must print YES if the smoothie can be made with the available ingredients, and NO if the smoothie cannot be made.

```
NO
YES
```
