

Problem 276: TLA

Difficulty: Easy

Author: Hongman Gu, Portland, Oregon, United States

Originally Published: Code Quest 2026

Problem Background

Managers and technical engineers love their acronyms: “I need the KPI report for the PRB ready by COB; do you have an ETA on that?” “The GPU converts the CAD file into a flat PNG format.” All of these TLA’s (Three Letter Acronyms) are nearly incomprehensible to most other people, but let’s create some more!

Problem Description

Many business and technical terms have long complicated names, so it’s easier to refer to them in acronym form. You’ll need to make acronyms for phrases by taking the first letter of each word and converting them to uppercase. For example, “portable network graphics” has the acronym “PNG”.

Words are separated using spaces and hyphens (-). All other punctuation can be removed and ignored. Use every word in a given phrase, even those that might normally be ignored in acronyms (e.g. articles such as ‘a’ and ‘the’). Also note that despite the name of the problem, a phrase/acronym might contain more or less than three words/letters.

Sample Input

The first line of your program’s input, **received from the standard input channel**, will contain a positive integer representing the number of test cases. Each test case will include a single line containing a phrase of at least two words, consisting of upper-case letters, lower-case letters, spaces, and/or punctuation symbols.

```
3
As Soon As Possible
Liquid-crystal display
Thank goodness it's Friday!
```

Sample Output

For each test case, your program must print an single line containing an uppercase acronym created from the given phrase.

```
ASAP
LCD
TGIF
```
